DETAILED ACTION

Claim Objections

Claim 15 is objected to because of the following informalities: "a second sequence of integers" on line 7 of claim 15 is inappropriate. It should be "a first sequence of integers". Appropriate correction is required.

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Allowable Subject Matter

Claims 1-14 are allowable. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record, considered individually or in combination, fails to fairly teach or suggest claimed method comprising among other limitation, a novel and unobvious limitation of "quantizing the first sequence of integers of the frame using a predicted sequence of integers representing the first sequence of integers to produce a second sequence of integers" structurally and functionally interconnected with other limitations in the manner as cited in claims 2-14.

Claims 15-16 are allowable if claim 15 being corrected the objection as indication above. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record, considered individually or in combination, fails to fairly teach or suggest claimed system comprising among other limitation, a novel and unobvious limitation of "adaptive quantization means arranged to quantize the first

sequence of integers of the frame using a predicted sequence of integers representing the first sequence of integers to produce a second sequence of integers” structurally and functionally interconnected with other limitations in the manner as cited in claim 16.

Claim 17 is allowable. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record, considered individually or in combination, fails to fairly teach or suggest claimed method comprising among other limitation, a novel and unobvious limitation of “quantizing the first sequence of integers of the frame using a predicted sequence of integers representing the first sequence of integers to produce a second sequence of integers” structurally and functionally interconnected with other limitations in the manner as cited in claims 2-14.
